

Order Picker Forklift Parts

Order Picker Forklift Parts - Order picking is also called order preparation operation. This is one of the chief processes in a warehouse and consists of people referred to as order pickers, collecting and taking articles in a particular quantity before shipment to be able to fulfill customer orders. Order picking is an easy warehousing process. The effectiveness in which this job is completed can be directly connected to the productivity of a supply chain. Thus, order picking is one of the most controlled logistic processes. Order picking falls in the category of the warehouse management system.

There are particular kinds of order picking which comprise: wave picking method, pick to box method, picker to part method or piece picking, sorting systems method and zone picking method.

The pick to box method involves the order picker filling the box with the stuff from his or her station. The box then moves to other picking stations until the customer order is finish. In this particular technique, there is no movement of the order picker personnel. In the wave picking method, the order pickers move around so as to collect the needed products for several orders. The piece picking or picker to part method is similar where the order pickers or picker move so as to gather the items required but for one order only.

In the sorting systems method, there is no movement of the order picking employees. Instead, the things are delivered to him or her by means of an automated system like for instance automatic storage or a conveyor system. In the zone picking method, each and every order picker is assigned to one specific zone. They are responsible for just realizing order picking within this specified zone.
